

Warmup

This warmup exercise proves to me you have installed the environment and are ready to continue.

Steps

- You have already done this
- You have already this this
- Now you have a VS Code window open on your computer and one open on the VM. On your computer, navigate to apple-linux-convergence.S
- Create the folder “warmup”
- Inside that folder, create the new empty file “apple-linux-convergence.S”
Don’t get the spelling wrong
- Copy the code from your computer to the VM. Save it
- Inside the folder, create the new empty file “main.S”
- On your computer, navigate to change_me.S
- Copy the code and paste it into “main.S” and save it
- Command or Control J to open a shell window
- Navigate to the warmup folder... “cd warmup”
- Make the required change
- Build the project “gcc main.S”
- Run the project “./a.out”
- Take the screen shot
- Submit the JPG file
- Go to soms (if legal and inclined to do so) or to the Red Zone
