# Expected / Projected / Actual Class Progression STUPID ZOOM UI DESIGN

I apologize for the videos become out of sync towards the end of the semester. Stupidity on the part of Zoom is amazing. From one of the links here, you cannot get back to the video's title / date. That's right, you can't relate videos from here back to time / calendar.

Unbelievable.

### Week 1 - 2/1

- Syllabus
- What's already assigned
- Install
- Questions
- Recording

### Week 2 - 2/6 2/8

- Tuesday's Recording
- Thursday's Recording
- Apple Silicon
- Windows
- Intel Mac get the distro, get QEMU, follow instructions for Windows except use your plain old terminal instead of WSL.
- Binary
- Powers of 2 up to 216
- Signed and Unsigned Integers
- 1's Complement and 2's Complement
- Registers
  - Integer Registers w & x
  - Why Have Registers
    - \* Speed of Processors Relative to RAM
  - Up to this point was Tuesday 2/6. Thursday's class follows.
  - Special Registers

- \* Program Counter pc
- \* Stack Pointer sp

## Week $3 - 2/13 \ 2/15$

- Tuesday's Recording
- Thursday's Recording
- Floating Point Registers h, s, d, v & q
  - h are half floats not used much are least significant half of s's
  - $-\,$  s are single precision values least significant half of d's
  - d are double precision values are least significant half of v's
  - v's are a vector of something
  - q's are a single 128 bit value
- Floating Point Construction
  - Floats / Doubles are approximations
  - Normalized scientific notation
    - \* Sign
    - \* Exponent
    - \* Mantissa
  - Single Precision how above are implemented
  - Double Precision how above are implemented
- Why Have Registers (Continued)
  - Steps Needed to Execute an Instruction
  - Pipelined Execution
- Aside:
  - Bit fields in C/C++
  - Unions in C/C++
- Above this was covered Tuesday. Below this covered Thursday.
- Special Registers (other than the really special registers)
  - Frame Pointer x29
  - Link Register x30
- How linking works what is an object file

- Assembly Language!
  - bl branch with link (x30)
  - ret return (uses x30)
  - and bitwise and
  - cbnz compare and branch if non-zero
  - cmp compare (is actually a subtraction)
  - b unconditional branch
  - .p2align power of 2 alignment
  - text what comes next is code
  - .global add "I have \_\_\_\_" to object file TOC
  - str, stp, ldr, ldp store to memory, load from memory
  - beq branch if the previous cmp is zero
  - add add two registers together and store result in a register
  - mov copy a value into a register
  - .end nothing else should come after this
  - .asciz put an ASCII string with null terminator into memory

### Week $4 - 2/20 \ 2/22$

- 2/20/2024
- 2/22/2024
- Tuesday
  - Assembly Language
  - File descriptors
  - system calls using CRT vs making them directly
- Thursday
  - Assembly Language
  - Going if, for, while, continue, break

# Week 5 - 2/27 2/29

- Tuesday
  - Review

- -2/27/2024
- All essays graded. 17 P1 left to grade been quite sick so progress has been slow
- Discuss essav
- Common biggest error seen so far in P1 is calling write assuming that x0 through x7 are not corrupted.
  - \* Demonstrate regs a program designed to drive this point home.
- P2 is assigned
- Go over P2
- nm demonstrated to demonstrate the "toc" i.e. the symbol table showing "have" and "need"
- demonstrate running as directly
- demonstrate running cpp directly
- demonstrate asking c++ to leave behind a .S file
- began discussion of structs

#### • Thursday

- -2/29/2024
- All P1 graded
- Review
- What is x29
- malloc() how it works
- free() how it works
- **brief** introduction to virtual memory
  - \* history none, fixed, static relocation, dynamic relocation (segmentation)
  - \* paging
  - \* linear page tables
- P2 questions

## "Spring Break"

### Week $6 - 3/12 \ 3/14$

#### • Tuesday

Class canceled due to injury to instructor.

#### • Thursday

The Debugging TalkRecording

# Week $7 - 3/19 \ 3/21$

#### • Tuesday

- Review and guided coding
- Recording

#### • Thursday

- We begin introducing hardware concepts
- Spinning Disks
  - \* Speed and latencies
  - \* Construction
  - \* RAID (part 1)
- Recording

### Week 8 - $3/26 \ 3/28$

#### • Tuesday

RAID (part 2)

Spaghetti Code

Review of Calling and Making "functions"

Recording

#### • Thursday

No class.

# Week 9 - $4/2 \ 4/4$

#### • Tuesday

Review

Review of calling Assembly from C and C++.

Review of function calls and parameters.

Writing a recursive function. Example: factorial.

Demonstration of recursion using GDB.

SSDs

Recording

#### • Thursday

Review.

What is the "this" pointer?

Going over Project 4.

Sample program doing floating point math.

Recording

## Week 10 - 4/9 4/11

### • Tuesday

Recording

#### • Thursday

No class due to illness.

# Week 11 - 4/16 4/18

#### • Tuesday

Going over Project 5

Introduced SIMD and SIMD instructions

Please stop using direct system calls

Introduced Intrinsics

Discussion of which floating point registers are "safe"

Recording

#### • Thursday

Precomputing

- Factorials in detailed example
- Sin / Cos etc. in concept
- Interpolation not exactly Comp Org but useful knowledge all in the context of pre-computation
  - \* Nearest Neighbor
  - \* Linear

- $\ast$  Quadratic using Lagrange Polynomials
- What's with float literals?

Recording

# Week 12 - 4/23 4/25

- Tuesday
  - Cache Systems

Recording

- Thursday
  - Logic Gates
  - Half Adder
  - Full Adder

Recording

# Week 13 - 4/30 5/2

- Tuesday
  - Review
  - Project Questions
  - Atomics
  - Review of Basic Gates
  - SR Latch
  - SR Flip Flop
  - D Flip Flop
- Thursday

Week 14 - 5/7 5/9
